

If Isp's have to share out to big business like Time warner has ate up CABLE with Earthlink / Road Runner / Aol all in 1 - Sharing DSL with Big companies will Eat up the bandwidth and me as a " pro - gamer " [www.thecpl.com](http://www.thecpl.com) ..... I dont want my bandwidth taking up more by having to share with Big Companies I dont have any concern for . If the isp would like to share with small companies to help them become bigger , better , richer , stronger , then go ahead but if its a well known company dont bother helping ..
